

Primal Technologies' Advance Pay / Prepaid operates on the Primal Open Services Platform (OSP) and provides a comprehensive rating structure enabling service providers to create a flexible and customizable billing strategy. Outbound and inbound calls/texts/MMS and data sessions can be rated in real-time based on many flexible criteria (incl. time, destination, location) and billed in various increments as specified by the carrier (and complementing Unlimited plans where required to reduce abuse/fraud). The OSP is interconnected to the network via any of the following network interfaces including ISUP, WIN, CAMEL, SIP, RADIUS, and DIAMETER.

WWW Subscriber Self-Care and an IVR (for call setup announcements, recharges) and PCI Compliant Credit card integration is included. A PIN management service allows prepaid cards to be generated with any desired valuation, expiry date, and expiry extension. A full set of USSD services is also available to manage, recharge, and transfer account balances.

Primal Skylight and Skynet provides the full experience for Customer Service, Engineering, Finance and Marketing to control and monitor the Prepaid service in real-time. Revenue Reports, Call Detail Records, and System Performance are all provided in real-time to the appropriate departments.
